

FOR IMMEDIATE RELEASE

The Art of Injection brings premium medical training to mobile devices

December 4, 2014 - One industry where the rise of smartphones is a huge benefit is medicine. More doctors, nurses and medics are being trained using mobile technology than ever before so it is a proven training aid.

[The Art of Injection](#) is a new training app designed to teach doctors and medical professionals from all over the world how to perform highly skilled, delicate injections to treat inflammatory pain. Approx 30% of patients who visit doctors surgeries are suffering from pain and can be treated in this way so a quick, comprehensive and robust training aid is required - [The Art of Injection](#) meets this demand.

This is not an app for the public or amateur medic, a professional knowledge of anatomy and physiology are required and a good technique but the execution of an effective injection is an art - hence [The Art of Injection](#).

The app contains 18 different and varied techniques that are comprehensively presented through video and 3D images. The injections are performed by app creator Dr Roger Stadra, a physician with over 30 years of experience who still maintains his own practice. Each technique features a recommendation on the type of syringe, needle and mixture to be used as well as a theory section that provides concentrated information on how to become a more skilled doctor. Being able to heal and nullify pain through a cortisone injection and providing patients with a safe, effective and well-documented treatment option.

[The Art of Injection](#) app is available to download from the Apple iTunes Store and Google Play Store for Android devices for only \$12.99. It functions on any iPhone, iPad or iPod Touch running iOS 6.0 or later.

Notes to Editors
